

Flexible Engineered Solutions

QA / Inspection / Certification

Flexible Engineered Solutions Quality Management System has been assessed and registered to ISO 9001:1994. FES Ltd is actively working towards ISO 9001:2000 accreditation.

Quality

The Quality Policy of FES Ltd states that customer requirements shall be fully understood, documented where possible, and adhered to by its employees.

All employees directly involved with the customer, or supplier, shall treat them with respect and never make promises that cannot be kept.

Quality Control

All components manufactured by FES undergo rigorous quality control in addition to any customer requirements.

Dimensional, hydrostatic and load testing are routinely undertaken on manufactured components, usually under the watchful eye of a third party.

Quality Assurance

All manufacturing materials are bought in certified from pre-approved sub-vendors. Full material traceability is maintained through all manufacturing processes.

Full certification covering the quality control functions at FES can be provided on request.

A full manufacturing / testing history of components is available through Manufacturing Record Books and Quality Plans.

Installation, maintenance and operation of FES manufactured components are detailed in comprehensive Installation and Operation Manuals.

Quality assurance and quality control is of prime importance to FES. Combined with vast experience and technical ability gives FES the edge in terms of reliability and above all flexibility; a flexibility that enables FES to provide a first class engineered solution.
